

SOME SEE A WALL.

WE SEE A PLACE
TO BREAK THROUGH.

Transplant surgeons Wayne Darnes, M.D. and Nick Selby, M.D.

What if your life depended on a transplant? One that had never been performed? What if the only hope was an organ from a living donor? Breakthrough kidney, liver and lung transplants are life-saving procedures pioneered by the Doctors of USC. All the more incredible is that many of these transplants, even heart and pancreas transplants, are performed without transfusion. Of course, few of us will ever need a transplant, but wouldn't you feel better if one of our doctors were yours? They can be. Learn more at www.usc.edu/health or call us at **1-800-USC-CARE**.
