

A close-up photograph of a person's hand holding a thin, black surgical instrument. The hand is positioned palm-up, and the instrument is held between the thumb and index finger. The background is a blurred, brightly lit surgical environment.

SOME SEE TINY HANDS.

WE SEE A SURGICAL REVOLUTION.

Cardiac surgeons Mark Cunningham, M.D. and Naught Barnes, M.D.

Minimally invasive surgery is medicine's new frontier and USC is at its leading edge. Here, surgeons guide tiny robotic hands to repair a heart through dime-sized holes. Spines are skillfully repaired, hips and knees replaced... all through tiny incisions. Less pain. Less scarring. Less time recovering. Once again, the pioneering Doctors of USC are proving that less is more. Wouldn't you feel better if one of our doctors were yours? They can be. Learn more at www.usc.edu/health or call us at **1-800-USC-CARE**.

The logo for The Doctors of USC, featuring the text "The Doctors of USC" in a serif font, with "The" and "of" in smaller sizes above and below "Doctors" respectively, all contained within a dark square.

SOME SEE CHAOS.

WE SEE A CURE FOR CANCER.

Hematologist Aliwantha Levine, MD

Someday cancer will be a disease of the past. At USC/Norris Comprehensive Cancer Center, our mission is to make that day happen sooner. Here, we scrutinize every aspect of the disease. Biology, chemistry, genetics, detection, medicine, surgery – ours is a passionate pursuit for a cure. And because we're designated by the National Cancer Institute as a comprehensive cancer center, our patients benefit today from the research and clinical trials that lead to the treatments of tomorrow. If you or someone you love is living with cancer, or for a second opinion, visit www.usc.edu/health or call us at 1-800-USC-CARE.
